

MODULE : 2 (HTML)

1. Define the terms: Website, Webpage, Web browser, Web server, HTML, CSS?

ANS: Website

- A website is a collection of related web pages that are typically identified with a common domain name and are published on the internet. Websites can contain various types of content, such as text, images, videos, and interactive elements, and they are accessed and viewed through web browsers.

Webpage

- A webpage is a single document or resource on the internet that is accessible through a web browser. It can contain text, images, multimedia elements, hyperlinks, and other types of content.

Web browser

- A web browser is a software application used to access information on the World Wide Web. It interprets HTML documents, displays webpages, and allows users to navigate between different websites and webpages

Web server

- A web server is a computer program or a device that hosts and serves web content to users over the internet

HTML

1. HTML is the standard markup language used to create webpages. It provides a set of tags and attributes that define the structure and layout of content on a webpage

CSS

- CSS is a stylesheet language used for describing the presentation and layout of HTML documents. CSS allows web developers to control the visual appearance of webpages, including elements like colors, fonts, spacing, and positioning

2. Create a webpage to show “This is my first HTML page”

ANS: <!DOCTYPE html>

```
<html lang="en">  
<head>  
  <title>My First HTML Page</title>  
</head>  
<body>  
  <h1>This is my first HTML page</h1>  
</body>  
</html>
```

8. In how many ways can a CSS be integrated as a web page?

ANS: 3 ways

- Inline css
- External css
- Internal css
